PROFESSIONAL SUMMARY

System Engineer with 2+ years of experience managing enterprise Linux infrastructure, virtualization, distributed storage, hosting automation, and production server environments. Experienced in deploying highly available Proxmox VE clusters with Ceph, securing enterprise networks using OPNsense, MikroTik, Cloudflare, and automating infrastructure using Docker, GitHub Actions, and Bash scripting. Passionate about building reliable, secure, and scalable infrastructure.

EMPLOYMENT HISTORY

System Engineer | B.A.R & Associates (Software Company)

January 2025 – Present

- **Designed and maintained** highly available Proxmox VE clusters with Ceph distributed storage supporting production workloads.
- **Automated VPS provisioning** using WHMCS and Virtualizor, reducing manual deployment time by 70%.
- **Performed Linux kernel tuning**, system optimization, and troubleshooting across Ubuntu, RHEL, and Windows Server environments.
- **Hardened network and server-level security** by implementing OPNsense (Transparent Bridges), Fail2Ban, MikroTik routing, Cloudflare, and custom firewall rules.
- **Streamlined application deployment** by containerizing applications with Docker and establishing automated GitHub Actions CI/CD pipelines.
- **Administered databases** including Oracle DB, PostgreSQL, and MSSQL, optimizing query performance and executing disaster recovery drills.

Junior Software Engineer | Beta Solution (Software Company)

February 2024 – December 2024

- **Developed and optimized** custom enterprise Oracle APEX applications and Oracle Forms/Reports, improving data processing and report generation times.
- **Built efficient database logic** using optimized PL/SQL stored procedures, triggers, and functions to speed up query execution.
- **Managed production server configurations**, domain routing, and SSL installations to ensure secure, high-uptime project deployments.

KEY ACHIEVEMENTS

- **Built a 5-node Proxmox HA Cluster** with Ceph distributed storage replication for critical production workloads.
- **Reduced deployment time by 70%** through full WHMCS and Virtualizor hosting workflow automation.
- **Managed 100+ production servers** maintaining a 99.9% infrastructure uptime record.
- **Optimized database query speeds** by up to 40% through PL/SQL index tuning and query refactoring.

CORE TECHNICAL SKILLS

Infrastructure & Virtualization: Proxmox VE, VMware, Virtualizor (KVM), TrueNAS, HA, Cluster Management, Linux Administration

Networking & Security: OPNsense, MikroTik Routing, DNS, DHCP, VLAN, HAProxy, Load Balancing, Cloudflare, VPN, Twingate, Active Directory

Hosting Automation: WHMCS, cPanel/WHM, Plesk, CyberPanel, HestiaCP, Domain & DNS Hosting Management

Web Stack: Apache, Nginx, LiteSpeed/OpenLiteSpeed, PHP-FPM, Redis

Storage Administration: Ceph Storage, ZFS, LVM, RAID, iSCSI, NFS, SMB, Snapshot Management, Backup & Recovery

DevOps & Automation: Docker, Kubernetes (Basic), Git, GitHub Actions, CI/CD, Infrastructure Automation, Bash Scripting, Python, PowerShell

Databases: Oracle DB, APEX, PostgreSQL, MySQL, MariaDB, MSSQL, PL/SQL, Database Design, SQL Tuning

Monitoring & Observability: Zabbix, Grafana, Uptime Monitoring, Log Analysis

KEY PROJECTS

Enterprise Proxmox HA Cluster

`Proxmox VE • Ceph • Debian Linux`

Deployed and managed a highly available 5-node virtualized environment. Configured Ceph distributed storage pools with active replication to achieve zero single points of failure (SPOF) and support seamless live migration of running workloads.

OPNsense Transparent Firewall

`OPNsense • MikroTik • HAProxy • VLANs • IDS/IPS`

Hardened enterprise network perimeter by designing a Layer-2 transparent bridge firewall with active IDS/IPS. Integrated MikroTik router for VLAN division, traffic shaping, and HAProxy for secure external load balancing.

WHMCS & Virtualizor Hosting Automation

`WHMCS • Virtualizor • KVM • SSL/TLS Certificates`

Automated the end-to-end VPS provisioning flow, provisioning VMs dynamically in a KVM environment via WHMCS billing hooks. Programmed automatic routing, DNS setup, and Let's Encrypt SSL generation.

Centralized Observability Stack

`Zabbix • Grafana • Bash • Webhooks`

Configured comprehensive resource tracking for 100+ servers and relational databases using Zabbix agent metrics. Integrated Grafana dashboards to monitor latency, IOPS, and memory usage, routing critical alerts through Telegram webhooks.

TRAINING & EDUCATION

Professional Training

Post-Graduate Diploma in Oracle Database Design & Development
IsDB-BISEW (Islamic Development Bank – BISEW), Dhaka
Duration: 1 Year (1,000 Hours intensive hands-on lab training)

Education

BBA in Management
Barishal BM College (2020)
CGPA: 2.6 / 4.0

HSC (Business Studies)
Dhaka College (2016) | GPA: 4.25 / 5.00

SSC (Business Studies)
Motijheel Model School & College (2014) | GPA: 5.00 / 5.00
